

# Online Seminar on Undergraduate Mathematics Education

## Math (education) for AI safety

Lionel Levine, Cornell University

Many of today's math majors will be tomorrow's AI engineers. How can we empower our students to succeed in a world pervaded by AI, and to shape that world? Tech progress may be inevitable, but it is also path-dependent: The technologies we pursue as a civilization are ultimately a function of choices made by individual

human beings. The future of AI holds great promise and, [many believe](#), great peril. What is the best way to encourage our students – especially those going into tech careers – to wrestle with the moral and ethical dimensions of AI? This talk will be interactive, and I'll mostly supply questions rather than answers, so please come prepared to debate!

**Noon ET, December 5, 2023**
